B MONI x TINC26 HACKATHON

Participant Handbook

Briefing and Rules | From Access to Agency
14 to 16 October 2026 | Virtual | 48 hours

Welcome

Welcome to the B Moni x TINC26 Hackathon, organised by Beyond4walls. In 48 hours, you and your team will build an AI-powered solution that helps people move from simply having access to money to having real control over it. This handbook is your complete briefing. Even if you miss the briefing call, everything you need to start building is here.

The big idea From Access to Agency

Millions of Nigerians now have a bank account, a wallet or a card. That is access. But having an account does not mean knowing how to budget, save, avoid scams, build credit or make good decisions with money. That gap between access and agency is where this hackathon lives.

Your job is to build an AI-powered solution that closes that gap for a real person in a real Nigerian context, especially students and young adults. Think of the student who receives an allowance and runs out in two weeks, the young trader who never saves, or the first-time earner who falls for a loan scam. Build for that person.

At a glance

Item	Details
Event	B Moni x TINC26 Hackathon, organised by Beyond4walls
Theme	From Access to Agency (AI and Financial Inclusion)
Format	Virtual, 48 hours, teams of 1 to 4
Kickoff	Wednesday 14 October 2026, 10:00 AM WAT
Submission deadline	Friday 16 October 2026, 10:00 AM WAT (hard cutoff)
Demos and results	Friday 16 October 2026, at TINC26 (Int'l Conference Centre, Lead City University, Ibadan)
Grand prize	N500,000, sponsored by B Moni
Official channel	The hackathon WhatsApp group

What you are building

A working prototype that uses AI to help people gain control over their money. Your project must:

- Address the theme of AI and financial inclusion.
- Serve a clear, specific user in Nigeria. Name who they are and what problem they have.
- Include a real AI component, and show how it makes the product better.
- Work as a live demo or prototype. An idea on slides is not enough.

Directions to spark ideas (you are free to choose your own):

Direction	What it could look like
Student budgeting	An AI assistant that splits an allowance across needs, savings and bills, and warns you before you overspend.
Savings and goals	An AI coach that spots a saving pattern and nudges or automates it toward a goal.
Financial literacy	A tutor that teaches money skills using a learner's own spending in a safe sandbox.
Scam and fraud protection	A model that flags suspicious messages, loans or transactions in plain language.
Group and campus money	Shared wallets for class dues, associations or events, with AI-generated summaries.
Credit and decentralised finance	Tools that help young people understand and safely access credit or DeFi products.

How the 48 hours will run

When (WAT)	What happens
Wed 14 Oct, 10:00 AM	Kickoff. Challenge brief, resources and API details shared in the group. Building starts.
14 to 16 Oct	Build. Support is available in the group throughout. Short check-in prompts will be posted so you can ask questions and share progress.
Fri 16 Oct, 10:00 AM	Submission deadline. Submit your project through the official form. Late submissions are not accepted.
Fri 16 Oct, afternoon	Shortlisted teams demo to the judges at TINC26. The grand prize winner is announced.

Please keep an eye on the group for exact times of check-ins and the demo order. We will confirm them there.

Rules

- **1. Eligibility.** Every team member must hold a valid TINC26 registration. Each person can be on one team only.
- **2. Teams.** Teams have 1 to 4 members. Team lists became final on 12 October. Each team has one lead who is the contact person.
- **3. Original work.** All code and design must be created within the 48-hour window. You may plan, research and brainstorm beforehand, but you may not arrive with a pre-built project.
- **4. Tools are allowed, but disclose them.** You may use open-source libraries, public APIs, AI tools and frameworks. List every major one in your submission.
- **5. Protect real data.** Never use real people's personal or financial information without their consent. Use mock or synthetic data.
- **6. No real money.** Your demo must not move real money or use real bank accounts, BVNs or cards. Use sandbox and test data only.
- **7. Keep your keys safe.** Never put API keys or secrets in a public repository. Use environment variables. Keys are for this hackathon only.
- **8. Conduct.** Be respectful to participants, organisers, mentors and judges. No harassment, discrimination or abuse. No plagiarism or submitting work that is not yours.
- **9. Disqualification.** Organisers may disqualify any team or person who breaks these rules, including teams with incomplete TINC26 registration.
- **10. Final decisions.** Judges' decisions and organisers' interpretations of these rules are final.

Get the B Moni app do this before kickoff

B Moni is the sponsor of this hackathon and the platform behind the financial tools you will be building around. Every participant should download the B Moni app and sign up for an account before kickoff on Wednesday 14 October. Using the app yourself is the fastest way to understand the product, the user experience and the problem you are designing for.

Step	What to do
1	Download the B Moni app. The official download link is posted in the hackathon WhatsApp group.
2	Sign up and create your own account, following the in-app steps.
3	Explore it as a user. Look at how wallets, transfers and cards work, and note what is easy and what is confusing.
4	Bring your findings to your team. Ask where a person would still lack control over their money, and where AI could help.

Use only your own details to sign up, and never share your login details or PINs with anyone, including teammates and organisers. Your app account is separate from the hackathon API sandbox: your demo should still use sandbox and test data only.

Using the B Moni API optional, but encouraged

B Moni, our sponsor, is providing access to its Embedded API. It gives you real financial infrastructure to build on, so your demo can show money actually moving instead of a mock-up. Documentation: embedded-docs.bmoni.com/markets/nigeria/

- **What it offers:** create a user with a wallet, verify identity (KYC), activate a Nigerian naira account with a virtual account number, transfer between users, issue cards and receive webhook alerts on transactions.
- **Why it helps:** your AI can act on the wallet, for example by saving automatically, flagging a risky transaction or showing a user their spending in real time.
- **Sandbox only:** build and demo against the test environment with test data. Access details will be shared in the group at kickoff.
- **Not required:** you can build without it, but teams that integrate it well will stand out under technical execution.

What to submit by Friday 16 October, 10:00 AM WAT

#	Item
1	Project name and a description of up to 150 words
2	Link to your working demo or prototype
3	Link to your code repository (public, or shared with the organisers)
4	A demo video of 2 to 3 minutes
5	A short note on the AI you used and who your user is

The submission form link will be posted in the group at kickoff. One submission per team, sent by the team lead.

How you will be judged

Criterion	Weight	What judges look for
Relevance to the theme	25%	Does it move people from access to agency?
Technical execution	25%	Does it work? Is the AI meaningful and the build solid?
Innovation and creativity	20%	A fresh idea or a smart take on a known problem.
Real-world impact	20%	Would it work for a real Nigerian user? Is it feasible?
Presentation and demo	10%	A clear story, a clear demo, a clear ask.

The judging panel includes representatives from B Moni. Ties are broken by the technical execution score. Judges with a personal or business link to a team will not score that team.

Prizes

Grand prize: N500,000, sponsored by B Moni. Winners may be asked for verification details before payout, and payout arrangements are confirmed with winners after judging.

Support and communication

- All official updates go through the hackathon WhatsApp group. Please do not rely on private messages for announcements.
- Technical and logistics questions go to the support team in the group. Support coverage runs across the 48 hours.
- Not sure about a rule? Ask early, not at the deadline.

Intellectual property and media

- Your team keeps ownership of your project.
- By submitting, you allow Beyond4walls, TINC26 and B Moni to showcase it in promotional material, with credit to your team.
- You agreed at registration to photos and video of the event.

Tips from the organisers

- **Pick one user.** A sharp problem for one person beats a vague app for everyone.
- **Get a thin slice working early.** Have an end-to-end flow running by the end of day one, then improve it.
- **Make the AI visible.** Show judges what the AI decides and why it matters.
- **Record your demo video early.** Do not leave it for the last hour.
- **Sleep.** A rested team ships a better demo than a tired one.

Before you start

1. Confirm your TINC26 ticket is valid, and sign up on the B Moni app.
2. Agree who your team lead is, and set up your repository and communication channel.
3. Be online at kickoff, Wednesday 14 October, 10:00 AM WAT.

We are excited to see what you build. Build something that gives people control.
